KID'S FOOT SIZING CHART

How to Find Their Size

- 1) Have your child wear the same socks that her or she will wear with their new shoes.
- 2) Help place their right foot on the diagram and align the back of their heel on the "Place Heel Here."
- 3) Tell your child to relax their toes.
- 4) Note the point where their longest toe intersects a line. Mark it down.
- 5) Switch to their left foot. Align, measure and mark, just as you did with the right foot.
- 6) Compare the two measurements. Your child's shoe size will be the larger of the two numbers. For example, if their right foot is a 10 and their left foot is a 10.5, you should order size 10.5.

How to Find Their Width

- 1) Place your child's right heel on the "Place Heel Here" on the diagram.
- 2) If the outside of the right foot touches the gray area, you should consider a wide-fit shoe for your child.
- 3) Repeat with their left foot.
- 4) If the outside of the left foot touches the gray area, you should consider a wide-fit shoe for your child.

ACCURACY CHECK

To ensure correct printing size place a credit card here. If it fits, the chart was printed at the correct size.

Find the best size and width for for your child's foot using this simple guide. Print on 8.5" x 11" paper at 100% (full size) for accuracy.
