

MEN'S FOOT SIZING CHART

How to Find Your Size

- 1) Wear the socks you will wear with your new shoes.
- 2) Place your right foot on the diagram, and align the back of your heel on the "Place Heel Here."
- 3) With your heel in place, relax your toes.
- 4) Note the point where your longest toe intersects a line. Mark it down. The shorter lines in between the numbered lines indicate half sizes.
- 5) Change to your left foot. Align, measure and mark, just like your right foot.
- 6) Compare the two measurements. Your shoe size will be the larger of the two numbers. For example, if your right foot is a 9 and your left foot is a 9.5, you should order size 9.5.

How to Find Your Width

- 1) Place your right heel on the "Place Heel Here" on the diagram.
- 2) Align your instep (the inside of your foot) on the vertical line.
- 3) If the outside of your right foot touches the gray area, you should consider a wide-fit shoe.
- 4) Repeat with your left foot. Align your instep (the inside of your foot) on the vertical line.
- 5) If the outside of your left foot touches the gray area, you should consider a wide-fit shoe.

Find the best size and width for your foot using this simple guide. Print on 8.5" x 11" paper at 100% (full size) in landscape orientation for accuracy.
